Ayush Soni

Backend Software Engineer | Java | Spring Boot | Microservices

soniayush2104@gmail.com | +91 8690678559 | Pune, India | linkedin.com/in/soni-ayush | github.com/aysoni

PROFESSIONAL SUMMARY

Backend Software Engineer with 2 years 10 months of experience designing, building, and configuring scalable, high-performing custom software solutions using Java and Spring Boot for enterprise platforms. Improved API performance by 30% and cut query times by 40% through SQL optimisation and indexing. Skilled in RESTful API design, microservices architecture, Kafka-based messaging, OAuth2/JWT security, Git-based version control, CI/CD pipelines, and P1/P2 incident resolution. Experienced leveraging AI-assisted development tools (Claude, Amazon Q) to accelerate code generation, debugging, and code review, and collaborating with cross-functional teams to gather requirements, deliver application features, and support business objectives.

TECHNICAL SKILLS

Languages: Java (SE 11 certified), SQL, JavaScript

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Security, Hibernate / JPA, React

Databases: Oracle SQL, PostgreSQL

Messaging & Workflow: Apache Kafka, Camunda BPM

Version Control & DevOps: Git, GitLab, Jenkins, CI/CD pipelines, Docker, Linux

AI-Augmented Development: Claude (Anthropic), Amazon Q Developer, AI-assisted code generation, debugging & code review, prompt engineering

Caching: Redis

Security: OAuth2, JWT, role-based access control

Testing & Tools: JUnit, Postman, Maven, IntelliJ IDEA, WebLogic

Practices: Microservices architecture, REST API design, SQL query optimisation, production support, agile methodology

PROFESSIONAL EXPERIENCE

Virtusa | Engineer Jan 2024 – Present

Pune, India • Promoted from Associate Engineer (Jan 2024 – Dec 2025)

- Designed and maintained enterprise-grade Spring Boot microservices and REST APIs powering IT governance and discrepancy management platforms handling high-volume enterprise transactions.
- Led root cause analysis and resolution of P1/P2 production incidents, restoring SLA compliance and improving mean time to recovery (MTTR).
- Implemented OAuth2 and JWT-based authentication flows within Spring Security to secure REST APIs across microservices boundaries.
- Integrated Apache Kafka for asynchronous event-driven communication between services, improving system decoupling and throughput.
- Collaborated with QA, DevOps, and business stakeholders across cross-functional teams throughout the SDLC, contributing to CI/CD pipeline maintenance via Jenkins and GitLab (Git).
- Leveraged AI-assisted development tools, including Claude and Amazon Q, to accelerate boilerplate code scaffolding, debugging, unit test generation, and code review, improving sprint delivery velocity.

Project: OR IT Governance Dashboard | Client: BT Group

Tech Stack: Java, Spring Boot, WebLogic, Oracle SQL, Hibernate/JPA

- Core backend developer for BT Group's enterprise IT Governance Dashboard, monitoring compliance and operational risk across large-scale infrastructure; built and maintained scalable Spring Boot microservices deployed on WebLogic.
- Improved API response time by 30% and optimised Oracle SQL schemas, improving data processing efficiency by ~35%, through strategic indexing and targeted database tuning.
- Led development of the Vulnerability Management module, enabling automated security risk analysis and audit reporting for compliance teams.
- Implemented RESTful APIs consumed by front-end dashboards, handling concurrent enterprise user load with consistent sub-second response times.

Project: OR Imperium — Discrepancy Detection Platform | Client: BT Group
Tech Stack: Java, Spring Boot, PostgreSQL, Microservices, Kafka, Camunda BPM

- Developed backend microservices for automated discrepancy detection between network topology and inventory datasets, processing millions of records per run.
- Reduced report generation time by 40% and manual intervention by ~50% by rewriting complex PostgreSQL queries and integrating Camunda BPM for workflow orchestration and remediation pipelines.
- Leveraged Apache Kafka for high-throughput event streaming between microservices, ensuring fault-tolerant, decoupled data comparison workflows.
- Optimised PostgreSQL queries and schema design to support high-volume batch comparisons with minimal latency.

Virtusa | Java Full Stack Developer Intern May 2023 – Aug 2023
Chennai, India (Remote)

- Built a full-stack web application using Spring Boot (backend) and React (frontend), delivering REST APIs for authentication, content management, and social features.
- Implemented backend services using Java, Spring Boot, Hibernate/JPA, and SQL; wrote JUnit tests to ensure service reliability.
- Optimised React components and asynchronous API calls, measurably improving client-side responsiveness and reducing unnecessary re-renders.

PERSONAL PROJECTS

TaskFlow — Dockerized Team Task-Board Platform | Java, Spring Boot, React, PostgreSQL, Docker, Nginx

- Designed and built a Dockerized team task-board platform with a React frontend, two independent Spring Boot microservices (auth-service and project-service), an Nginx API gateway, and per-service PostgreSQL databases.
- Implemented JWT-based authentication and REST APIs for account registration/login, project management, and task creation, listing, and status updates.
- Architected the system around service-owned databases and an API gateway, enforcing clear service boundaries and independent data ownership.
- Containerized the full stack with Docker Compose across local, free-tier, and production environments, and set up a Caddy-based production deployment with automatic HTTPS on a VPS.
- Defined a CI/CD-ready workflow: build and test each service independently, produce tagged container images, and deploy the same images to staging and production.

Social Media Backend Platform | Java, Spring Boot, REST API, PostgreSQL, JUnit

- Built RESTful backend microservices for user management, posts, likes, and comments using Java and Spring Boot, supporting scalable social platform features.
- Designed stateless REST APIs adhering to REST principles, improving horizontal scalability and long-term maintainability of core service layer.
- Optimised SQL queries and applied strategic indexing, improving database query performance by 25% across high-frequency read endpoints.
- Implemented server-side pagination and sorting for efficient data retrieval, reducing response payload size and improving API throughput under load.

EDUCATION

B.Tech — Computer Science & Engineering (AI and Data Science) July 2019 – Dec 2023
DIT University, Dehradun, India | CGPA: 8.30 / 10.0

CERTIFICATIONS

- Oracle Certified Professional: Java SE 11 Developer — Oracle (Jan 2025)
- Gen AI Assisted Engineer — Virtusa (Dec 2024)
- Agile Methodology — Cognizant (Mar 2023)
